DESCRIPTORS *Building Design; *Construction (Process); Construction Materials; *Educational Equipment; *Educational Facilities Design; *Educational Facilities Planning; Permuted Indexes; Structural Elements (Construction)

ABSTRACT

Some 2,500 descriptors dealing with the planning and design of educational buildings and equipment are included in this permuted index which was developed by the architects of the United Nations Educational, Scientific, and Cultural Organization's (Unesco's) Educational Facilities Section, the Unesco Regional Offices Educational Facilities units, and a thesaurus expert. The educational terms selected deal mainly with planning, administration, and financing. Terms dealing with the technical aspects of building, such as construction processes, building components, construction systems, and building materials and services, are also included, as are concepts from related subject fields in science, technology, the social sciences, and culture. It is noted that this thesaurus has been incorporated into Unesco's computerized information system and that it is stored within the "EDFAC data base." (ESR)

INTRODUCTION

The continuous growth of information on educational facilities and its related fields engendered the need for a specialized thesaurus. Such a thesaurus was developed by the architects of Unesco's Educational Facilities Section, the Unesco Regional Offices Educational Facilities units and a thesaurus expert.

As an extension of the Unesco thesaurus, this specialized thesaurus which contains some 2,500 descriptors lays emphasis on the planning and design of educational buildings and equipment. It also includes terms dealing with the technical aspects of building, such as construction processes, building components, construction systems and building material and services. The educational terms deal mainly with planning, administration and financing. Concepts from related subject fields in science and technology, the social sciences and culture are also included.

This thesaurus has been organized in three ways : alphabetical, classified, and permuted. It is the permuted index of educational facilities descriptors that is presented in this report.

With the assistance of the Computerized Documentation Systems of Unesco this thesaurus has been incorporated into Unesco's computerized information system and is stored within the "EDFAC data base".
